Introduction

In order to continue to advance technologically in the UK & globally, a full fibre network infrastructure is required. Future innovation is tied to a successful rollout and implementation of a whole raft of new digital services and infrastructure such as 5G, V2X, IOT etc. that will truly revolutionize our business and personal lives.

Pendragon Management believes that Installing full fibre networks cost effectively is essential to support the ever developing digital world and ensure world-class connectivity to meet the future demands of consumers and businesses in the years ahead. Full fibre is a key enabler of all new digital networks including 5G the first generation of mobile technology designed to support multiple applications, from mobile broadband and entertainment services, to industrial applications such as robotics and logistics with dedicated tailored time controlled virtual networks.

Healthcare is a major issue today and a fully developed 5G network will be life changing. 5G has the potential to dramatically improve the quality of healthcare received by hundreds of millions of patients enabling significant changes in the way healthcare is delivered and also improve the UK's GDP.

Pendragon Management's goal is to deliver best in class business solutions to Major Digital Broadband providers and support National and local Governments to achieve the level of full fibre Infrastructure required to achieve these goals.

Company Overview

Pendragon Management is a UK registered company. Based in Wales our skills have been honed around the world from the UK to national rollouts & Smart City assignments in Qatar, Saudi Arabia and the Caribbean., Our management team have over 40 years experience in Telecoms and broadband networks managing and delivering major full fibre optic deployments.

Our services are designed to support and advise organisations throughout the whole project lifecycle. We offer customers the practical solutions they require whilst advising on the management and commercial aspects of major roll outs. To develop our direct services to the marketplace we have developed channel partnerships with several major Infrastructure / Civil providers to offer a solution for civils, wayleaves, permitting through to design, Installation, cabling, project and stakeholder management.

Our experience enables us to consult and collaborate with companies and Government affiliated organisations on the potential opportunities of integrating and the productisation of 5G, IOT, V2X, FTTX, Street Furniture and Smart City initiatives.

Pendragon are advisers to the UK5G programme under DCMS for the rural communities area and sit on the special BSI/WM5G Smart city street furniture working group giving us a deeper insight into the market direction and relevant standards impacting these areas which are critical for the new 5G millimetre wave, V2X and IOT rollouts now required.

Installation Services

We deliver a comprehensive range of services through the design and installation phase of major rollout programmes as overviewed below. Our strength is our understanding of the installation phase, its context within the final digital services being delivered and, our ability to deliver scalable teams across all disciplines required.

Programme & Project Services

Pendragon delivers the program and stakeholder management, technical knowledge and commercial experience to design, deliver and productise a high-quality network. Our consultancy and PMO services can also support setting up a project from the initial costing phases through to tendering support and manage multiple vendors.

Advisory Positions and Government Consultancy

The UK Government sponsors a number of programmes aimed at accelerating the roll out of 5G networks across the UK and increasing the country's GDP.

Pendragon Management are advisers to the UK5G programme under the Digital Culture Media and Sports (DCMS) Ministry for the rural communities area and also sit on the special BSI/WM5G Smart city street furniture working group giving us a deeper insight into the market direction and relevant standards impacting these areas which are critical for the new 5G millimetre wave, V2X and IOT rollouts now required.
